NO

FILLER

H I A L U R O N I D A S E

www.nofiller.pl

NO FILLER 1500 IU
CREATED FOR PROFESSIONALS WHO DON'T ACCEPT COMPROMISES.

This is a **premium-class hyaluronidase**, manufactured in Spain and developed on the basis of the latest research on hyaluronic acid degradation. With **NO FILLER**, clinics regain comfort in their daily work, and patients regain comfort in life.

Hyaluronidase is an enzyme that breaks down cross-linked hyaluronic acid. It immediately disrupts its chemical bonds and initiates the absorption process by the body. It has been used in medicine for over 60 years. It is applied not only in aesthetic medicine, but also in other medical fields such as gynecology, orthopedics, oncology, and ophthalmology.

Indications:

- removal of excessive amounts of injected hyaluronic acid (overcorrection);
- persistent lumps or irregularities at the HA implantation site;
- unwanted migration of the filler;
- unwanted visibility/shine-through of filler due to overly superficial HA placement;
- intolerance to hyaluronic acid or to the cross-linking agent.

sénsi FaceLift.®

Sensi Face Lift - when your skin craves rebirth

www.sensifacelift.com

**sénsi
FaceLift.**

AN INTELLIGENT BIOSTIMULATOR WITH A LIFTING EFFECT.

Sensi Face Lift is the answer to these challenges — an advanced tissue stimulator that combines four powerful ingredients to restore freshness, firmness, and a natural glow to your face. A unique combination of high- and low-molecular-weight hyaluronic acid works like a dual hydration reservoir — it fills, smooths, and simultaneously acts in deeper skin layers, providing a long-lasting elasticity effect. A blend of high- and low-molecular-weight hyaluronic acid, polynucleotides, and trehalose.

- Works on multiple levels: Hydrates, rebuilds, stimulates, and lifts.

A recommended product for the **face, neck, décolleté, and hands**. Perfect for needle or cannula techniques. Suitable for mesotherapy and deep injection techniques.

THE RESULT?

Skin that looks as if time has paused: firm, radiant, full of energy — ready to impress every single day.

MED
ROYAL

sénsi eyes:

A NATURAL BIOSTIMULATOR FOR THE EYE AREA, WITH A MULTI-DIRECTIONAL MECHANISM OF ACTION.

SENSI EYES is the best choice for everyone expecting an intense rejuvenating effect in a natural and safe way.

A product composed of low-molecular-weight polynucleotide chain fragments (50–100 kDa). It offers a multi-directional mechanism of action and is also dedicated to delicate skin areas, including the eye region.

SENSI EYES contains highly purified polynucleotides capable of activating skin bioregeneration processes both at a deep level (fat and bone tissue) and in the dermis (fibroblast stimulation).

Designed for biorestructuring the eye-area skin, both on the upper and lower eyelids. Contains highly purified polynucleotides of natural origin.

Created to improve nourishment of the very delicate and thin skin around the eyes.

FACE

EGZOSOMY & NAD+

ExoGlow Face - **A next-generation regenerative treatment** for patients looking for visible skin rejuvenation without invasive procedures.

Enriched with dual-density hyaluronic acid, neuromodulator-mimicking peptides, growth factors, and **100 billion plant-derived exosomes**, this formula deeply hydrates, smooths expression lines, and supports long-term collagen production.

NAD+ activates SIRT1, known as the longevity protein, boosting cellular energy and skin vitality from within.

ExoGlow Face works through all skin layers, restoring radiance, elasticity, and firmness. Ideal for dull, dehydrated, or aging skin of the face, neck, and décolleté. It delivers progressive, natural results with each session, supporting a visible transformation and deep biological regeneration.

MEDICAL DEVICE IN CONFORMITY WITH REGULATION (EU) 2017/745 (MDR), BEARING THE CE MARKING.

MED

EXOSOMES & NAD+ ExoGlow NAD+ PLLA + CMC

An advanced skin booster that hydrates, smooths, and improves skin texture for both face and body.

Its unique formula combines:

- **poly-L-lactic acid (PLLA)** for subtle collagen stimulation,
- lightly cross-linked sodium **CMC** for structural support,
- a synergistic blend of **NAD+** and **plant-derived exosomes** for cellular energy and regeneration.

This lightweight, ready-to-use product restores skin tone, improves elasticity, and provides a firmer, revitalized look **without adding volume**. Enriched with hyaluronic acid and natural antioxidants, ExoGlow NAD+ PLLA + CMC protects against oxidative stress while soothing the skin.

Ideal for areas such as the cheeks, jawline, neck, décolleté, hands, and arms, delivering visible improvement in hydration, texture, and glow within **3-5 sessions**.

PLLA

CMC & EGZOSOMY & NAD +

EXOSOMES & NAD+ ExoCaha An innovative product for firming, hydrating, and restructuring skin of the face and body.

Its unique formula combines:

- **calcium hydroxyapatite (CaHA)** to induce collagen,
- hydrolyzed hyaluronic acid for deep hydration,
- a synergistic amino-acid complex (glycine, proline, lysine) for structural repair.

Enhanced with **NAD+** and **100 billion plant-derived exosomes**, ExoCaha activates skin regeneration, increases elasticity, and restores firmness **without adding volume**. Centella asiatica and turmeric extracts provide antioxidant protection and reduce inflammation.

Recommended for areas such as cheeks, jawline, neck, décolleté, hands, and knees, ExoCaha delivers visible improvement in density, hydration, and firmness already after **3-5 sessions**. A powerful, non-surgical option for patients seeking natural enhancement and long-lasting results.

CAHA

EGZOSOMY & NAD +

EXOSOMES & NAD+ ExoGlow Hair - An effective scalp therapy designed to restore hair-follicle function, reduce hair loss, and increase density.

By combining biomimetic peptides, copper tripeptide, biotin, and **100 billion plant-derived exosomes**, this formula reactivates follicles, strengthens the hair shaft, and improves scalp microcirculation.

NAD+ plays a key role by stimulating SIRT1, optimizing energy production, and supporting tissue regeneration at the root level. Apple- and papaya-derived vesicles act antioxidant and anti-inflammatory, supporting a healthier scalp ecosystem.

ExoGlow Hair is suitable for men and women with early hair loss, stress-related alopecia, or scalp imbalance. Regular use improves hair thickness, elasticity, and overall vitality.

HAIR

EGZOSOMY & NAD +

MEDICAL DEVICE IN CONFORMITY WITH REGULATION (EU) 2017/745 (MDR), BEARING THE CE MARKING.

LIME

EGZOSOMY & NAD+

MEDICAL DEVICE IN CONFORMITY WITH REGULATION (EU) 2017/745 (MDR), BEARING THE CE MARKING.

EXOSOMES & NAD+ ExoLime - An advanced solution for body-contouring mesotherapy that combines lipolytic efficacy with cellular rejuvenation. Its synergistic blend of deoxycholate, riboflavin, lecithin, biomimetic peptides, and centella asiatica targets localized fat deposits, smooths tissues, and restores firmness.

NAD+ enhances mitochondrial performance, supporting metabolism and fat repair, while **100 billion plant-derived exosomes** stimulate fibroblasts and improve skin quality. ExoLime is ideal for shaping areas such as the abdomen, thighs, arms, flanks, or post-liposuction zones.

It visibly reduces volume and increases skin elasticity after just a few sessions, offering a clinically confirmed, non-invasive contouring protocol.

Phase one uses trichloroacetic acid (TCA), lactobionic acid, and salicylic acid to improve texture, reduce discoloration, and cleanse pores.

Phase two delivers antioxidant vitamins, **NAD+**, and **100 billion plant-derived exosomes** to repair and soothe the skin, while boosting hydration and collagen production. Unlike classic peels, ExoPeel supports cellular renewal without aggressive shedding, making it suitable for all seasons and skin types. It improves tone, glow, elasticity, and bounce — used alone or within layered protocols.

A new generation of peels for long-term epidermal health.

PEEL

EGZOSOMY & NAD+

PDRN

EGZOSOMY & NAD+

MEDICAL DEVICE IN CONFORMITY WITH REGULATION (EU) 2017/745 (MDR), BEARING THE CE MARKING.

EXOSOMES & NAD+ ExoGlow PDRN

A high-performance regenerative solution for skin requiring intensive repair. Enriched with sodium DNA (PDRN), biomimetic peptides, dual-molecular-weight hyaluronic acid, **NAD+** and **100 billion plant-derived exosomes**, it targets collagen synthesis, barrier rebuilding, and structural rejuvenation.

This formula actively supports healing and renewal, making it ideal after laser microneedling and peels, or for aging skin showing signs of fatigue and dryness.

NAD+ increases mitochondrial activity, while exosomes deliver biological signals that stimulate fibroblasts and repair damaged tissue. ExoGlow PDRN offers both fast skin recovery and long-term biostimulation, improving tone, texture, and hydration from the very first application.

HYALivia

The future of innovation in aesthetics.

www.hyalivia.pl

Hyalivia AquaLips SIRT1 is a revolutionary lip-care product that deeply hydrates, protects, and regenerates lip tissue, improving elasticity, structure, and natural volume.

The first lip-care product scientifically developed with **NAD+ to enhance Sirtuin 1 activation**, and dual-molecular-weight hyaluronic acid, ensuring excellent hydration, regeneration, and long-lasting performance.

Hyalivia AquaLips is for people who want lips that look *healthier* — softer, better hydrated, with a subtle sheen — and who rule out enlargement or a visibly changed shape. Non-cross-linked hyaluronic acid (HA) — a linear form with high hygroscopicity — binds water within the tissue matrix and acts like an “internal balm,” supporting the feeling of hydration, softness, and smoothness of the vermillion.

A conscious choice for those who value naturalness, comfort, and discretion, made after a thorough consultation and based on realistic expectations.

MED

HYALivia TOTAL

HYALivia TOTAL Designed for people who expect a visible yet harmonious change in selected areas of the face and body: contour definition, improved proportions, and projection, while maintaining natural features and silhouette. Cross-linked hyaluronic acid (HA) — the core responsible for shaping form/proportions in selected areas of the face and body.

The formula includes: **glycine + proline**
Structural amino acids of the extracellular matrix; components supporting the tissue microenvironment.

Shape comes from cross-linked HA; amino acids may support microenvironment comfort. They serve as a component that supports tissue condition within contour-modeling plans. An excellent solution for patients who accept a change in shape within natural limits, following qualification and goal discussion.

MEDICAL DEVICE IN CONFORMITY WITH REGULATION (EU) 2017/745 (MDR), BEARING THE CE MARKING.

HYALivia BODY FILLER Provides natural-looking volume enhancement and defined contours. Ideal for restoring lost volume or achieving youthful firmness. Delivers long-lasting hydration, a volumizing effect, and improves skin elasticity, leaving the skin smoother and more refined.

A dual-action 3D formula creates a three-dimensional network. It combines **65 billion plant exosomes** with **20 mg of cross-linked hyaluronic acid**, ensuring a natural, balanced approach to skin rejuvenation.

Specially designed molecular structure ensures optimal stability and prolonged action. Cross-linking technology increases durability, minimizes degradation, and provides consistent results in texture improvement and fine-line reduction. It supports tissue regeneration, offering immediate volume enhancement.

Exosome technology supports regeneration and improves elasticity and skin structure. Cross-linked hyaluronic acid ensures durability, long-lasting hydration, smoothness, and a refined finish.

HYALivia BODY FILLER

MEDICAL DEVICE IN CONFORMITY WITH REGULATION (EU) 2017/745 (MDR), BEARING THE CE MARKING.

HYALivia PRP / GTR

HYALivia GTR PRP Indicated for a wide range of regenerative and aesthetic treatments, offering versatility and effectiveness across many treatment areas. High platelet concentration (96%) ensures exceptionally rich and efficient plasma production, making it suitable for both rejuvenation and tissue repair. Supports skin rejuvenation, hair regrowth, and tissue repair across multiple indications. The innovation of HYALIVIA GTR PRP lies in its unique gel-based composition.

An excellent product for skin rejuvenation: improves laxity, fine wrinkles, and under-eye shadows. Ideal for regeneration after laser procedures and peels. Also supports recovery after surgical procedures or skin trauma. Platelet-rich plasma (PRP) plays a key role in regenerative medicine, leveraging the body's natural biological mechanisms to rebuild tissues.

HYALIVIA GTR PRP is not just another PRP system — it is a smarter, safer, and more consistent regenerative tool for modern aesthetic-medicine professionals.

MEDICAL DEVICE IN CONFORMITY WITH REGULATION (EU) 2017/745 (MDR), BEARING THE CE MARKING.

REJUPLLA®

INNOVATIVE BIOACTIVATOR
WITH POLY-L-LACTIC ACID.

www.rejuplla.pl

REJUPLLA®

MEDICAL DEVICE IN CONFORMITY WITH REGULATION (EU) 2017/745 (MDR),
BEARING THE CE MARKING.

Reju PLLA is a Korean tissue stimulator combining poly-L-lactic acid (PLLA) with other ingredients, such as polynucleotides (PN), to rejuvenate and regenerate the skin.

This innovative combination is designed not only to fill deficits, but above all to stimulate natural collagen production, leading to long-lasting improvement in skin firmness and elasticity.

The treatment works in two stages. Initial subtle filling effects are visible immediately after the procedure *благодаря* PN. The long-term result appears after several weeks, once PLLA stimulates the skin to produce new collagen.

Poly-L-lactic acid (PLLA) is biocompatible and biodegradable. It gradually releases in the skin, stimulating fibroblasts to generate collagen. Thanks to this, results look natural and develop progressively.

The procedure increases skin density, elasticity, and tension, smoothing wrinkles and improving facial contours. It can also be used on other body areas such as the neck, décolleté, hands, or arms.

Effects may last up to **2 years**, though the exact duration depends on individual predispositions and skin condition.

MED
ROYAL

GANAX

Poly-L-lactic acid that changes everything...

www.gana.pl

GANAX 630 mg is a PLLA-based filler that promotes the self-generation of natural collagen for the face and body. GANAX is indicated for increasing the volume of depressed areas, particularly for correcting skin depressions such as folds, wrinkles and furrows. Also suitable for corrections of large volume facial fat loss signs. It helps regain the original shape of the skin and add volume through collagen revitalization, and helps patients maintain the self-confidence they have lost.

- Due to the freeze-drying process, the micropores (one nanometer) of PLLA are easily broken up and dissolved in only 5-10 minutes, with few problems with granulomas.
- Due to the fast dissolution time, there is no need to book or wait, and treatment is possible right away. With a high PLLA content, the resulting volume is even higher and the generation time lasts longer.
- Compared with other products, more PLLA content per vial. Largest possible particle size for collagen generation

Areas of application:

- Correction of sagging facial parts (cheeks, temples, chin, etc.).
- Improve areas lacking volume such as the middle and lower parts of the face
- Improvement of dark areas of the face
- Treatment of hand wrinkles
- Treatment of acne and chickenpox scars
- Treatment of sagging skin of the neck and body (upper arms, thighs, buttocks, etc.) with improvement of elasticity and contours

The application of the product is reserved exclusively for qualified healthcare operators.

MEDICAL DEVICE IN CONFORMITY WITH REGULATION (EU) 2017/745 (MDR), BEARING THE CE MARKING.

G GANA V

Poly-L-lactic acid that changes everything...

www.gana.pl

Gana V 210 mg is an alloplastic filler based on poly-L-lactic acid aimed at restoring volume to the facial tissues. The primary purpose of this preparation is to stimulate collagen production.

The advantages of Gana:

- comfort and painless procedure
 - long-lasting effect
 - high viscoelasticity
 - high level of anti-inflammatory cytokines TNF
 - enhancement of metabolic processes in cells
- Gana V is ideal for correcting deep and severe wrinkles.

Purpose of Gana V:

- reducing wrinkles and deep folds (nasolabial folds, worry lines, and chin wrinkles)
 - eliminating sagging tissue on the cheeks
 - repositioning of hands and elbows
 - skin lifting in the knee area
- The effect lasts from 6 months up to more than 2 years.

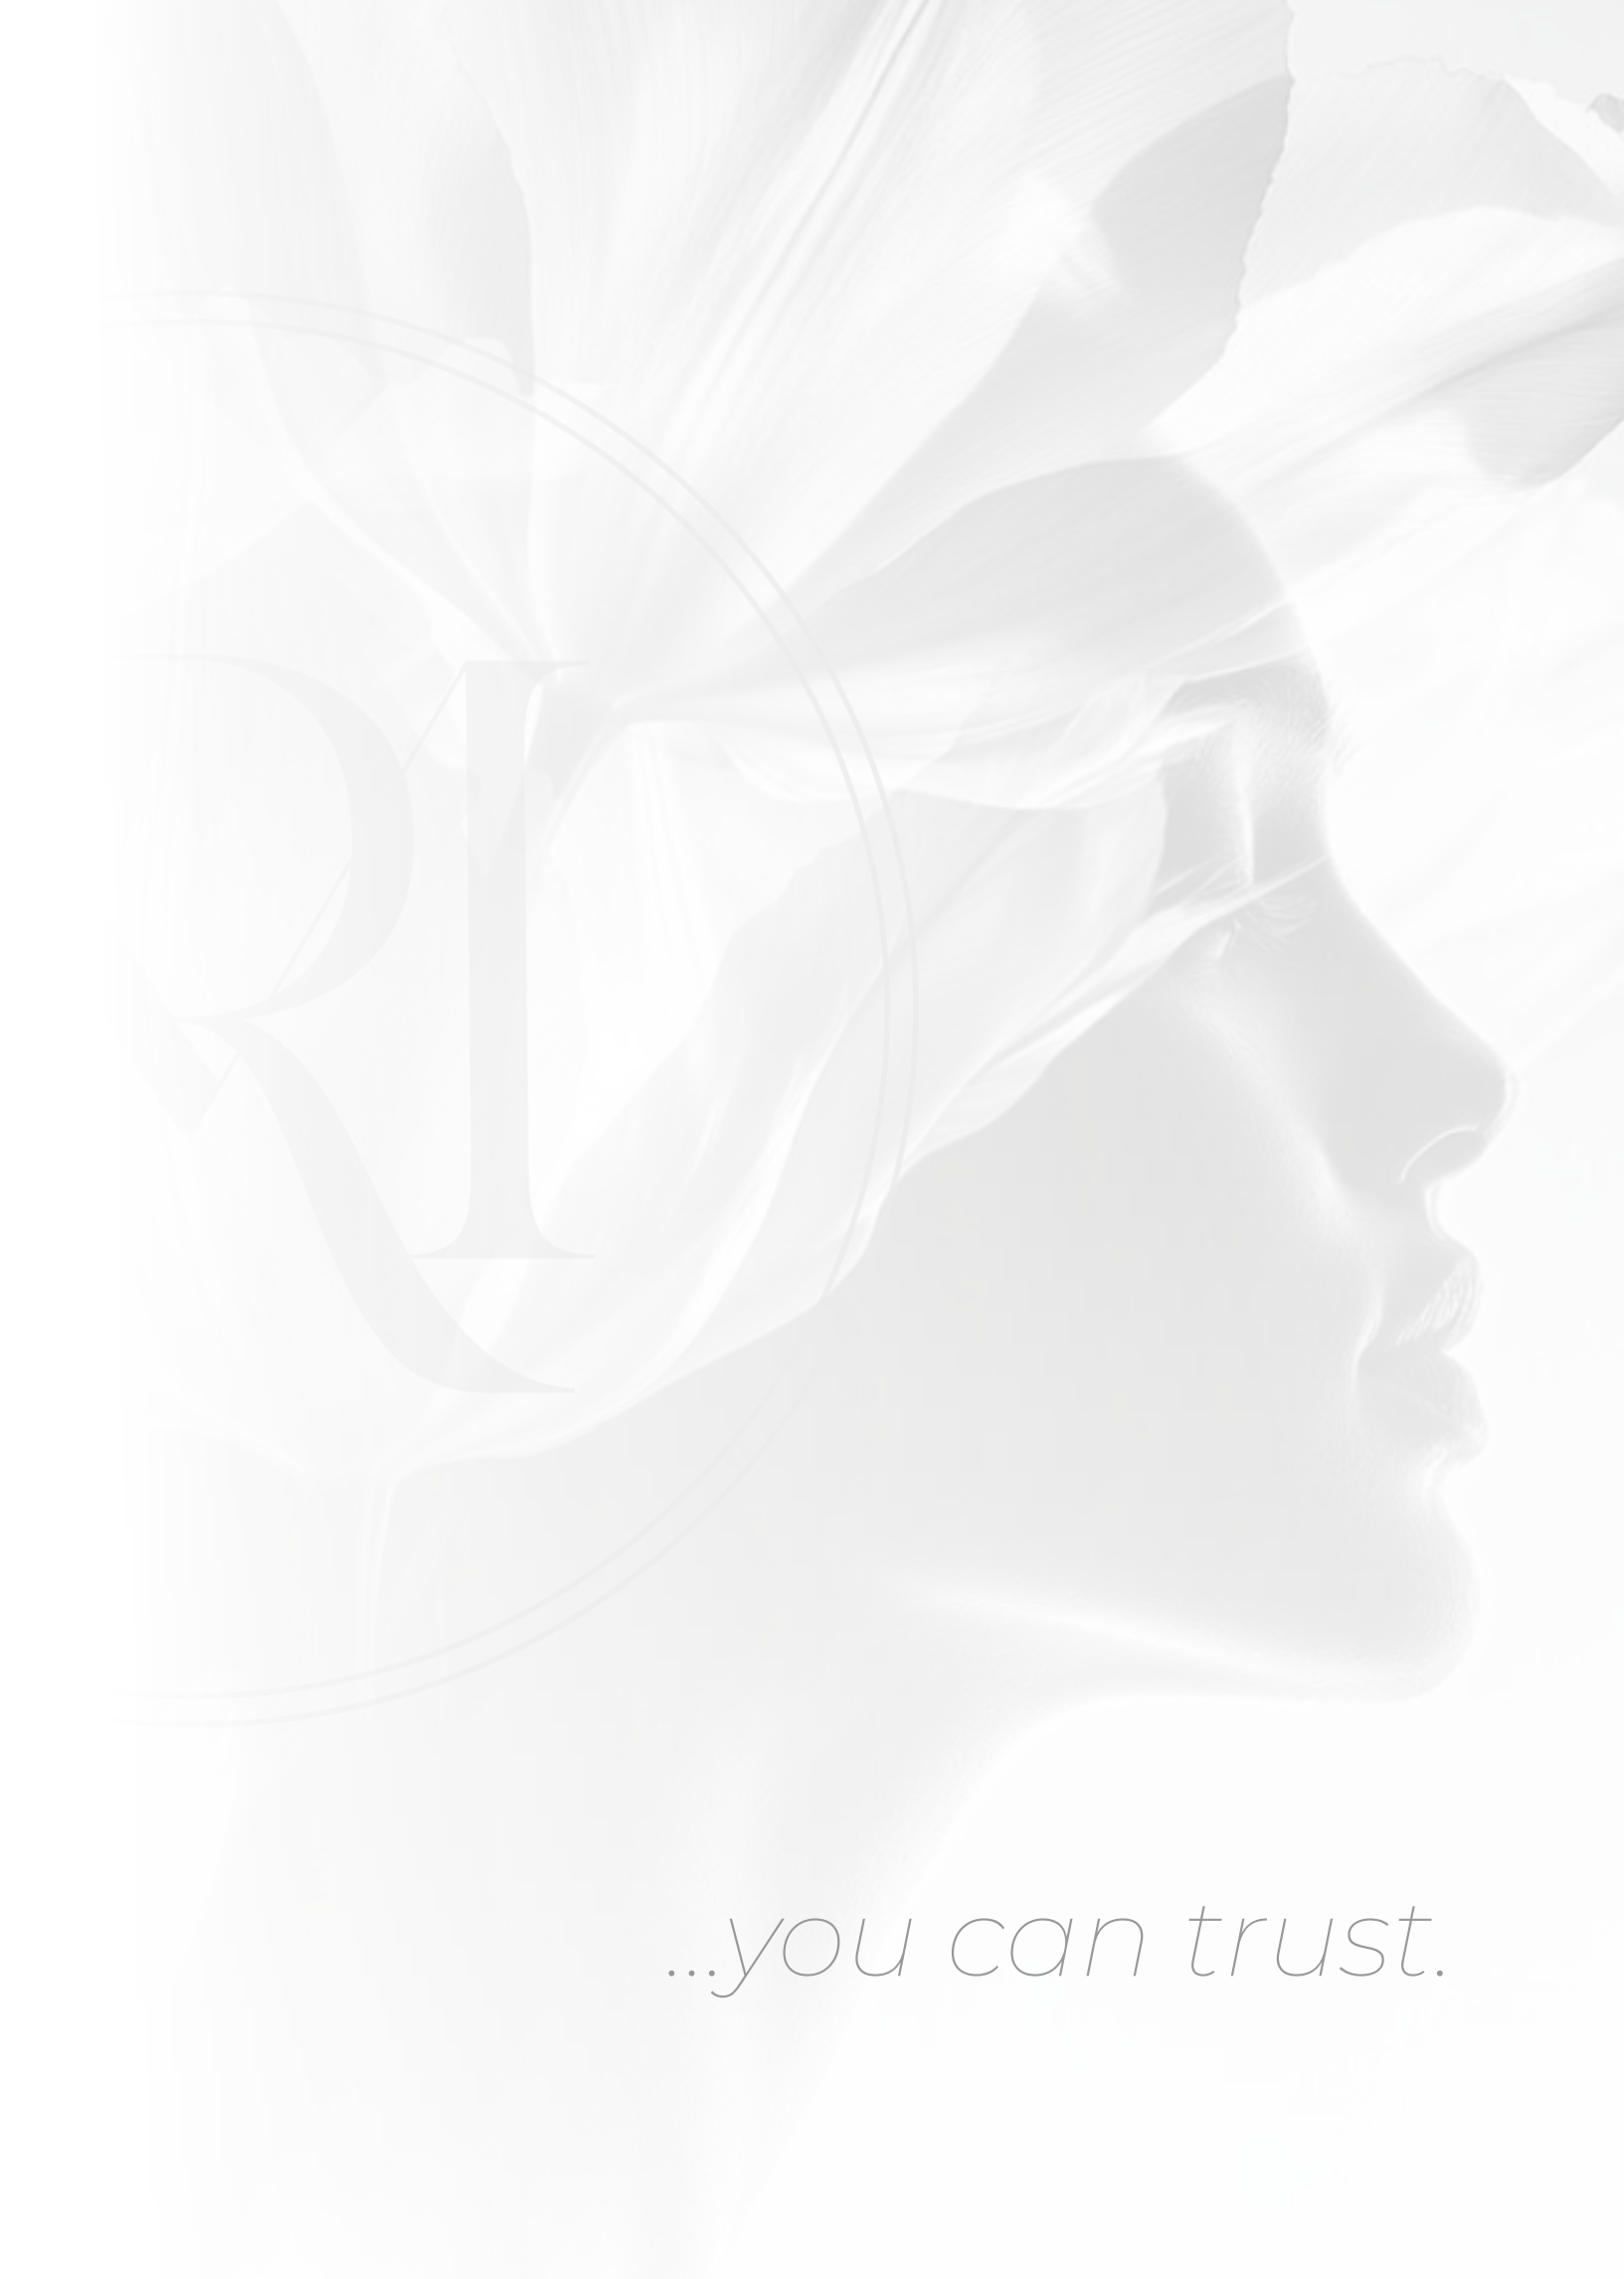

The product has contraindications. We are not responsible for any negative effects you may encounter after administering the products by yourself. It is recommended to consult a doctor or a medical professional for any procedure.

The application of the product is reserved exclusively for qualified healthcare operators.

MEDICAL DEVICE IN CONFORMITY WITH REGULATION (EU) 2017/745 (MDR), BEARING THE CE MARKING.
